

## 47100 Bone Black

Color Index: Pigment Black 9

Bone black is made by carbonization of bones over 400°C but not above 800°C.

The organic components of the bones carbonize by which carbon particles are incorporated into the matrix of the inorganic bone substance.

### Chemical and Physical Properties

|  |                  |  |
|--|------------------|--|
| Coloring strength<br>(gegen Laborstandard) | 95 – 100 %       | DIN 55986-A<br>(modified, test method LALPA001)      |
| pH-Value                                   | 9.0 – 11.0       | DIN EN ISO 787/9                                     |
| Volatile components<br>(at 105°C)          | ≤ 2 %            | DIN EN ISO 787/2<br>(modified, test method LABPA006) |
| Oil value                                  | 60 ± 10 ml/100 g | DIN EN ISO 787/5<br>(modified, test method LABPA020) |
| Particle size                              | 50 – 300µm       |  |
